

EE Simulation Scenarios Results

EE Simulation Scenarios Results

Date: 2026-06-03

Scope and data used

This note summarizes simulated outcomes from CSV outputs in ExcelFiles/Output/ for:

- EE_PDP8
- EE_Directive10
- EE_Directive10_NoBESS
- EE_PDP8_PV_BEES_NoBESS

Requested-but-missing output files at the time of reporting:

- EE_Directive10_PV_BEES.csv (not found)
- EE_PDP8_PV_BEES.csv (not found)

Metric definitions

- GDP growth: annual growth of Y_1 in percent.
- GDP level: model level Y_1 (reported relatively in comparison tables).
- Investment share: $I_1 / Y_1 * 100$.
- Consumption share: $C_1 / Y_1 * 100$.
- Energy intensity index: $((Q_{A_2_1} + Q_{PV_1}) / (Q_{A_2_1}(2026) + Q_{PV_1}(2026))) / (Y_1 / Y_1(2026)) * 100$.
- Final energy demand index: $((Q_{A_F_2_1} + Q_{PV_1}) / (Q_{A_F_2_1}(2026) + Q_{PV_1}(2026))) * 100$.
- Emissions index: $E_1 / E_1(2026) * 100$.

Headline findings

1. EE_Directive10 and EE_Directive10_NoBESS deliver slightly higher GDP levels than EE_PDP8 throughout the horizon (about +0.44% to +0.58% by 2030-2050).
2. The two Directive10 variants are very close to each other in macro aggregates, indicating limited additional macro divergence from BESS in the available run set.
3. Energy intensity improves (lower index) in Directive10 variants relative to EE_PDP8.

4. Emissions are identical across the four available EE outputs at the key years and over the 2026-2050 cumulative index sum.

Key-year levels

2030

Scenario	GDP growth (%)	Investment share (% GDP)	Consumption share (% GDP)	Energy intensity (index)	d
EE_PDP8	9.972	36.290	52.233	80.135	2
EE_Directive10	9.963	36.494	52.146	78.256	2
EE_Directive10_NoBESS	9.963	36.492	52.147	78.255	2
EE_PDP8_PV_BESS_NoBESS	9.971	36.388	52.187	79.200	2

2040

Scenario	GDP growth (%)	Investment share (% GDP)	Consumption share (% GDP)	Energy intensity (index)	d
EE_PDP8	7.503	35.597	45.843	53.952	2
EE_Directive10	7.505	35.689	45.802	52.316	2
EE_Directive10_NoBESS	7.504	35.684	45.805	52.317	2
EE_PDP8_PV_BESS_NoBESS	7.501	35.636	45.827	53.204	2

2050

Scenario	GDP growth (%)	Investment share (% GDP)	Consumption share (% GDP)	Energy intensity (index)	d
EE_PDP8	7.553	44.870	39.579	21.915	2
EE_Directive10	7.433	44.852	39.641	21.065	2
EE_Directive10_NoBESS	7.455	44.860	39.632	21.083	2
EE_PDP8_PV_BESS_NoBESS	7.508	44.865	39.604	21.540	2

Differences vs EE_PDP8

2030 deltas (scenario minus EE_PDP8)

Scenario	GDP growth (pp)	GDP level (%)	Investment share (pp GDP)	Consumption share (pp GDP)	(pe
EE_Directive10	-0.009	+0.442	+0.205	-0.087	
EE_Directive10_NoBESS	-0.009	+0.440	+0.203	-0.086	
EE_PDP8_PV_BESS_NoBESS	-0.001	+0.219	+0.098	-0.046	

2040 deltas (scenario minus EE_PDP8)

Scenario	GDP growth (pp)	GDP level (%)	Investment share (pp GDP)	Consumption share (pp GDP)	(pe
EE_Directive10	+0.002	+0.579	+0.092	-0.041	
EE_Directive10_NoBESS	+0.001	+0.571	+0.086	-0.038	
EE_PDP8_PV_BESS_NoBESS	-0.001	+0.262	+0.038	-0.016	

2050 deltas (scenario minus EE_PDP8)

Scenario	GDP growth (pp)	GDP level (%)	Investment share (pp GDP)	Consumption share (pp GDP)	(pe
EE_Directive10	-0.120	+0.446	-0.018	+0.061	
EE_Directive10_NoBESS	-0.098	+0.459	-0.011	+0.053	
EE_PDP8_PV_BESS_NoBESS	-0.044	+0.207	-0.005	+0.025	

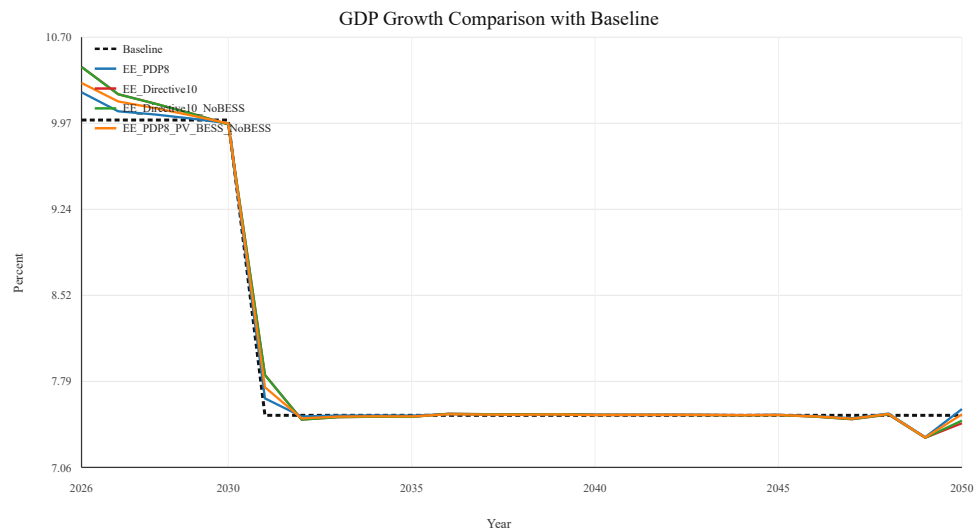

Aggregate indicators (2026-2050)

Scenario	Average GDP growth (%)	Sum of emissions index
EE_PDP8	8.015	1792.148
EE_Directive10	8.035	1792.148

Scenario	Average GDP growth (%)	Sum of emissions index
EE_Directive10_NoBESS	8.035	1792.148
EE_PDP8_PV_BESS_NoBESS	8.024	1792.148

Interpretation notes

- The near-zero gap between EE_Directive10 and EE_Directive10_NoBESS in these outputs suggests BESS effects are modest for the selected macro aggregates under the current calibration/run settings.
- Identical emissions paths indicate either a shared binding constraint/policy path in these runs or scenario differences that primarily affect non-emissions channels.

- To complete the originally requested five-scenario comparison, generate and export the missing PV+BESS scenario outputs (EE_Directive10_PV_BESS.csv and/or EE_PDP8_PV_BESS.csv) and append them to this table set.
